

**Margeritta von Wilamowitz-Moellendorff** studied psychology with a minor in business administration at Saarland University. After several internships abroad (e.g. at Volkswagen in Mexico and at Lanxess in Tokyo) she received her diploma with the main focus on Human-Machine Interaction (Work and Organizational Psychology) in 2005. She wrote her thesis at the chair for Artificial Intelligence of Prof. Wahlster in a project funded by the German Research Foundation (*Deutsche Forschungsgemeinschaft*).

Ms von Wilamowitz-Moellendorff started her scientific career in a Siemens research project at the Institute of Psychology at the Darmstadt University of Technology. Since October 2006, she has been working at the Institute of Ergonomics (IAD) at the same university as a research assistant leading different projects focusing on product ergonomics and vehicle ergonomics. Among her main research fields is the domain of air traffic control and aviation, on which she has published several articles.
